

SIFER CARD PROGRAMMER

SOFTWARE RELEASE NOTES

SIFER Card Programmer 1.1.1

17/08/16

Changes

- ▶ Changed some in-program text labels to clarify that the SIFER Card Programmer cannot be used to create SIFER-C cards.

SIFER Card Programmer 1.1.0

28/10/15

Changes

- ▶ Cards are now programmed in re-writeable mode by default, instead of read-only mode. There is now an option to toggle read-only card writing on or off.

Bug Fixes

- ▶ Fixed error message caused by clicking the "Identify" button while no COM port is selected.

SIFER Card Programmer 1.0.0 (Initial Release)

Features

- ▶ Supports customisation of SIFER-U cards with either an installer-specified site key, or with a Gold Card supplied by Inner Range.
- ▶ Application retains a database of site keys which can be used for card customisation.
- ▶ Supports read-only customisation of SIFER-U cards.
NOTE: (programming re-writable cards is not supported in this version).
- ▶ Supports firmware update functionality for SCP devices.
