# ABOUT US

Inner Range is a manufacturer and integrator of unified Video, Access Control and Security solutions. Founded in Melbourne, Australia, Inner Range has over 35 years of innovation and has more than 150,000 systems deployed globally.

We manufacture end-to-end solutions from the card you badge at one of our readers to the controller securing the door, right through to the enterprise security management software monitoring multiple sites anywhere in the world. Our scalable products are suitable for high-end residential, commercial and enterprise sites across verticals such as education, healthcare, government and critical infrastructure.

66

We are passionate about empowering our customers to protect what they value most, their property, their possessions and most importantly – their people.

99

Inner Range offers our partners a range of competency-based training courses to ensure the best experience with our products and outcomes for their customers. Additionally, our global support team ensures that any issues are resolved quickly with minimal impact to the end user.

From entry to enterprise, Inner Range provides an end-to-end security solution capable of addressing the most difficult building management needs, providing peace of mind for you and your people.

Our continual investment in research and development puts our products at the forefront of access control, security, video and smart building technology. We partner with best-in-class providers of adjacent technologies such as intercom, payroll, building automation and incorporate the latest in AI technology with solutions for facial recognition, biometrics, number plate recognition and many more. With over 130 native integrations to 3rd party systems and open integration pathways, we provide our customers with a unified system behind a single pane of glass.

# SECURING RETAIL

From single-store small business ventures, to billion dollar multi-tenanted shopping centres, Inner Range systems are the perfect solution for protecting and managing retail environments.

- Multi-layered security approach
- Surveillance systems with high-resolution cameras
- Access control systems with biometric authentication
- Robust perimeter barriers
- Trained security personnel and regular patrols
- Collaboration with law enforcement agencies
- Emergency response protocols
- Integration of smart technologies
- Tailored security strategy to address specific vulnerabilities

# CENTRALISED MANAGEMENT

## PREVENTION OF THEFT, SHOPLIFTING AND BURGLARY

An Inner Range Access Control system ensures that only authorised staff are permitted in restricted areas such as stock warehouses and administration spaces, while customers are free to browse in showroom areas. Additionally, staff can have access to restricted areas only during time periods when they have a valid reason to enter secured spaces.

Inner Range Intrusion Detection systems provide retail managers peace of mind that their retail locations are fully secured outside trading hours with high security, redundant back-to-base monitoring, plus integrated video and alarm information pushed to delegated staff's mobile devices.

## CONTRACTOR MANAGEMENT AND GUARD TOUR

Large shopping centres often require guards to patrol the facilities both during and after business hours. Integriti's guard tour functionality ensures guards present credentials at various locations to ensure the patrols are being undertaken; additionally alarms can be raised if guards do not present within a given time period.

Integriti has native functionality to handle the challenges of managing hundreds of contractors who require access to retail premises. In addition to its native functionality, Integriti also integrates with dedicated contractor management systems. These systems ensure contractors are provided temporary access credentials, and have complied with onsite health and safety protocols.

## SAFETY OF STAFF AND CUSTOMERS

Retail environments suffer challenges from violent and abusive customers, while high value retail outlets such as jewellery stores or designer clothes outlets suffer the very real risk robbery by armed offenders.

The Inner Range Enterprise Platform offers comprehensive fixed and mobile duress solutions, whereby management or security guards can immediately be notified when a dangerous situation occurs. In addition, Integriti integrates with Real Time Location Systems (RTLS) which send duress and location information that can generate alarms to notify relevant stakeholders with locations displayed on Integriti's floor plan (Schematic) application.

## MAXIMISING THE PROFITABILITY OF EXPENSIVE RETAIL SPACES

Integriti systems seamlessly integrate with Video Management Systems and Analytics engines that can provide sophisticated retail optimisation solutions.

These include people counting, heat maps to track the spaces where customers spend time and xyz. Additional facial recognition systems can also be used to identify VIP customers queuing bottle necks.

# UNIFIED SOLUTION

Retail environments are unique.

Brick and mortar retailers face an extremely challenging business environment with hyper competition from online retailers and a range of diverse security challenges.

## ANALYTICS INTEGRATION

Reducing the time to acquire and interpret information, data analytic technology advances the intelligence of not only the security system, but also the building applications. Those systems use their own communication protocols, and Inner Range acts as a data aggregator to normalize that data.

## ACCESS CONTROL

Allowing the approved persons to be in the places that they need to complete their job is critical. But even more critical is preventing unapproved persons from accessing secure areas. This protects the people and assets of the organization and can also reduce other costs such as insurance.

## INTRUDER DETECTION

Notifying the correct authority of unwanted persons in an area or on a property in an appropriate timeframe helps prevent loss. Escalation of specific events to the correct responder allows them to make better decisions for resolving the issue.

## DURESS ALARMS

During an emergency event, staff and customers can use a duress alarm to trigger a response from the appropriate team. Inner Range's Enterprise Platform allows the control of alarms such that if it is not responded to in a determined time period, it can be escalated to a higher authority.

## FACIAL RECOGNITION

This identification of a person by a camera, as well as the credentials that the person holds or knows, can assist in assuring that the correct people are in the proper area. Facial recognition analytics can act as the credential to allow a person to gain entry to a building or area.

## VIDEO SURVEILLANCE

Utilising the Enterprise Integriti platform, system operators are able to visually verify alarm events in real-time, using video feeds from an interconnected Video Surveillance platform. Security Personnel are able to view, control and customize Video layouts all within one centrally managed system.

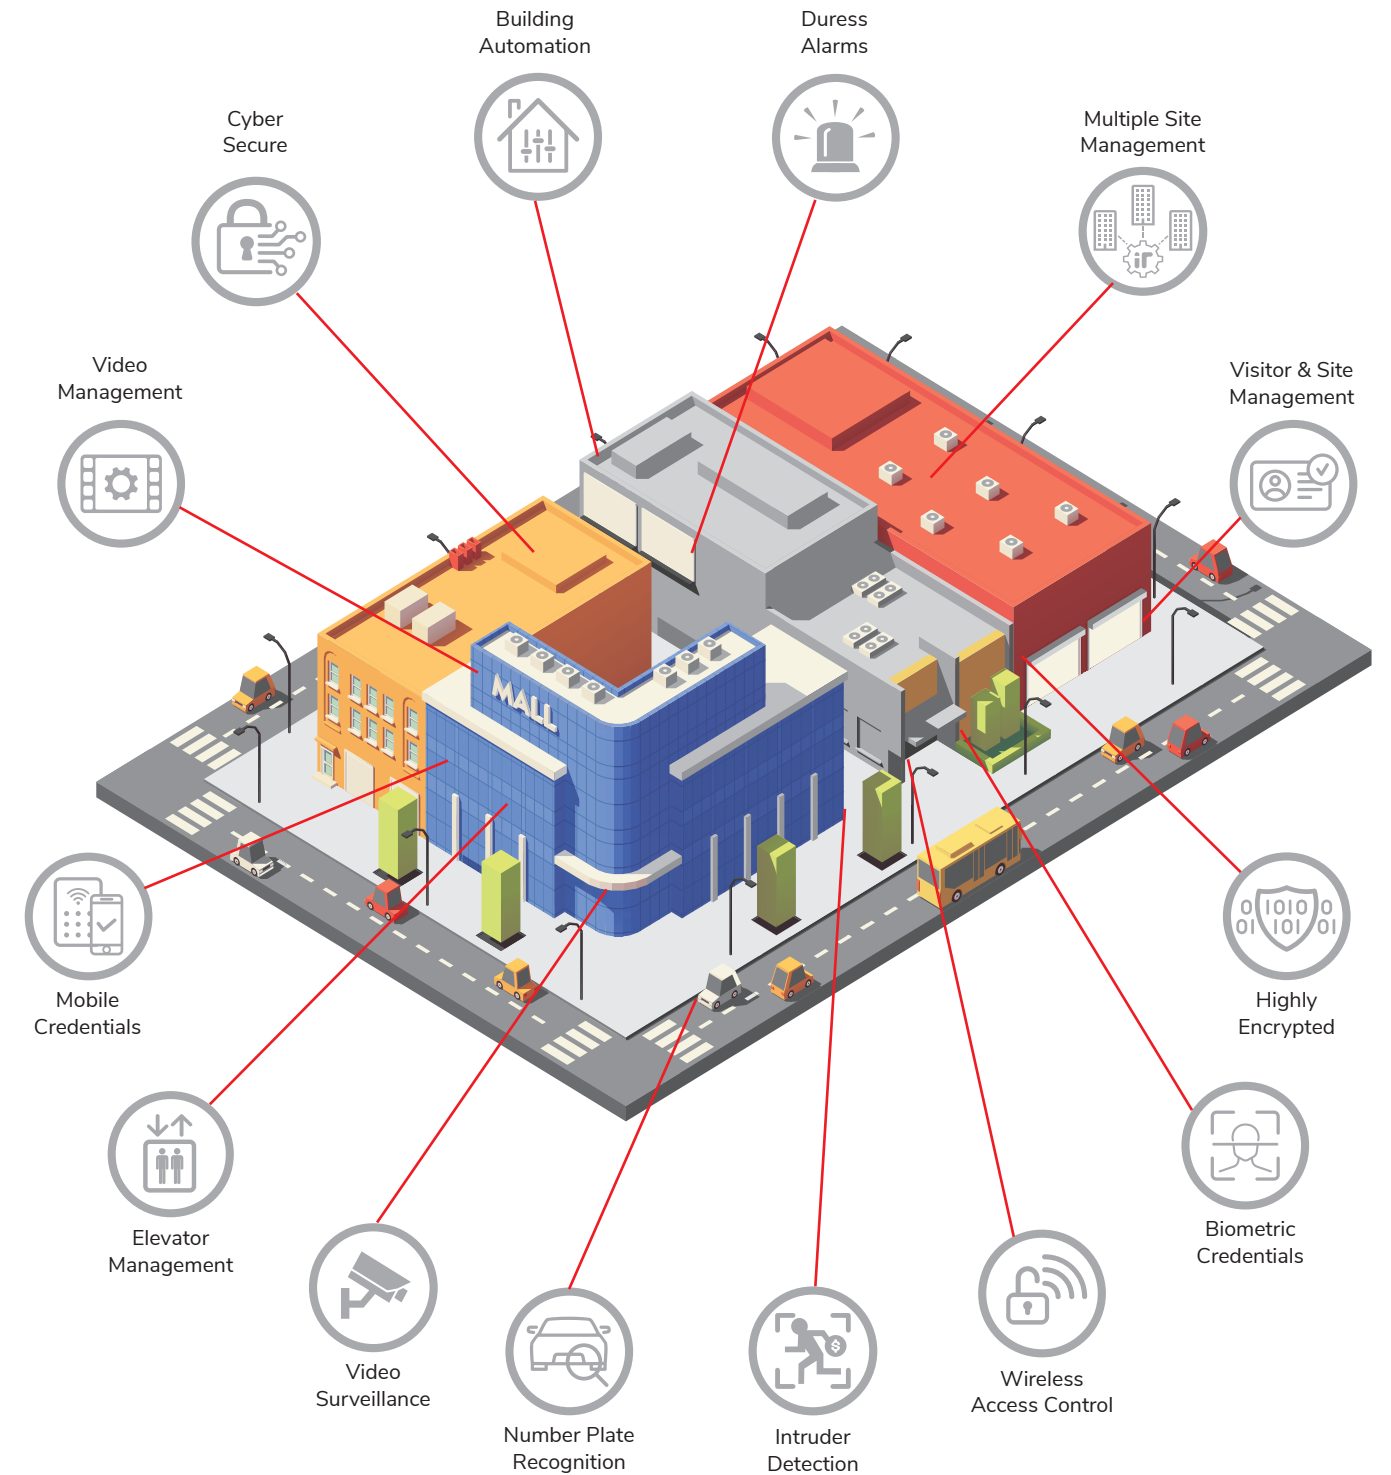

## RTLS INTEGRATION

Real-Time Location Systems are commonly deployed in high-security situations, and allow Security Operators to maintain accurate status and location of Security Personnel in real-time. The RTLS integration with Integriti allows for location monitoring via the same graphical interface as every other aspect of the system.

## MOBILE APPS

Knowing information immediately has become the expectation of society. In access control systems, various alarms and events need to be conveyed to the correct responder as quickly as possible. Push notification of the events at a customer site assists them with management of the situation, whether it be urgent or otherwise.
